

10 Ways Qalyptus Outperforms NPrinting

Qalyptus is fully integrated with an intuitive interface that complements Qlik Sense by incorporating it into your organization's environment.

Qalyptus

NPrinting

1 - Application sources

Qalyptus allows you to create reports from QlikView and Qlik Sense applications.

It is possible to connect Qalyptus to QlikView, Qlik Sense on-premise, Qlik Sense Desktop, and **Qlik Sense SaaS**.

Use Qalyptus on-premise with Qlik Sense on-premise and Qalyptus Cloud with Qlik Sense Cloud (SaaS).

NPrinting allows you to create reports from QlikView and Qlik Sense on-premise only.

2 - Creation of reports

Qalyptus integrates your favorite Office suite tools (PowerPoint, Excel, Word) and HTML to create reports.

You can use *Master Items* to create reports.

Qalyptus support exporting third-party objects (extensions) as table or image.

With NPrinting, you can't do both of these things.

NPrinting allows you to generate reports with the same formats as Qalyptus.

In NPrinting, you need to know the ID of each Qlik object you want to use to create a report. However, **Qalyptus** simplifies searching for objects by grouping them by a sheet and adding an icon corresponding to their type.

3 - Distribution of reports

We attach great importance to how we will view the reports. Qalyptus offers more flexibility and choice in the distribution of reports:

- Local folders
- Sending by email
- Publish in a web portal (Qalyptus Hub)
- Remote server via FTP/SFTP
- SharePoint, OneDrive, Google Drive, and Dropbox

You can run the tasks in Parallel or Serial. You can also choose the priority of each task (from 1 to 100).

NPrinting offers fewer choices for distributing reports to users:

- Local folders
- Sending by email
- Publish in a web portal (Newsstand)
- Publish in Qlik Sense Hub

Tasks only run in parallel, and there is no way to choose the task execution priority.

4 - On-Demand Reports

Qalyptus allows Qlik Sense users to generate on-demand reports from Qlik Sense applications using the "**Qalyptus On-Demand**" extension.

The extension supports Windows authentication, email/password, and **SSO with SAML**.

The extension can be used with Qlik Sense mobile (iPad, iPhone, Android). This feature is available in all editions of Qalyptus.

NPrinting allows you to generate on-demand reports from Qlik Sense and QlikView.

However, users can use the on-demand reporting extension by authenticating only with their Windows credentials. The extension does not work on Qlik Sense mobile (iPad, iPhone, Android).

The extension cannot be used with NPrinting Small Business Edition (SBE).

5- Qlik Sense Subscriptions

With **Qalyptus Notify**, users can subscribe to a Qlik Sense sheet or app.

With **Qalyptus Self-Reporting**, users can schedule a task to distribute reports to recipients from Qlik Sense.

[Learn more](#)

NPrinting does not have this feature.

6 - Roadmap

Qalyptus is independent. Our choices and decisions are made for the sole purpose of providing you with a better reporting tool.

All our efforts are concentrated on the Reporting market.

The Qalyptus product strategy is very clear and focused on innovation.

You can count on us not to stop innovating and offer you the complete Reporting solution.

NPrinting is a "value-added product" for Qlik®. In other words, Qlik Sense and QlikView is the priority product of Qlik®.

Just look at the NPrinting release notes to see that most of the changes are bug fixes, not new features.

Besides, Qlik® will not develop a feature that goes against the business model of Qlik Sense and QlikView even if the feature brings you value.

7- Import Users and Groups

Qalyptus offers you several possibilities to create and import users without any external tool:

- Manual creation
- Import from an Excel file
- Import from Active Directory
- import from Azure AD

NPrinting allows you to create and import users with fewer possibilities:

- Manual creation
- Import from an Excel file
- Import from Active Directory

8 - Setup and administration

Qalyptus supports installation on the same server as Qlik Sense. No additional infrastructure costs.

Qalyptus administration is made easy; for example, you can create a fully integrated backup for your site, and you can restore it in two clicks.

Importing and synchronizing users and groups from Active Directory is fully integrated.

Installing and configuring NPrinting is very hard. It is not us who say it; it is our customers who have used NPrinting.

Installing Qlik Sense and NPrinting on the same computer is not a supported configuration.

You should invest in a dedicated NPrinting server.

Some tasks require external tools or programs; as backup and restore, importing users, etc.

9 - Trial version

We aim to *build incredible, affordable software that people can try before buying*.

You can try Qalyptus on-premise and Qalyptus Cloud for free for 30 days (expandable up to 90 days).

NPrinting is not available for download to the public.

You must contact a Qlik® salesperson to have a trial license.

10 - Pricing

Qalyptus is designed for teams of all sizes. Our products start at just 40 € per month per developer of reports. The server version of Qalyptus begins at just 200 € per month for 251 recipients.

NPrinting pricing is different and less flexible than that of Qalyptus.

- NPrinting Server is over \$16,000 per year.
- NPrinting Server SBE (limited to 250 viewers, 2 developers, and without the on-Demand report feature) is more than \$5,000 per year.

Remember — Our goal is to build incredible, affordable software that people can try before buying.
